

•• brand guidelines

A jeweler's product, photographed in a laboratory.

How Novieri looks, sounds and behaves — the colors, the type, the marks, and the rules that keep them consistent across two languages and two markets.

Warmth and rigor, at the same time.

Novieri is family-run — the name fuses the two founders' surnames — and holds enterprise standards. That pairing is the brand. Not a friendly company that happens to be technical, and not a technical company that has learned to smile: both at once, in every artifact.

Personality

Premium. Jewel. Distinctive. Lean into the logo's gem language — jewel-tone commitment, gold used with intent, drama in deliberate moments. The reference for precision is Linear: engineered layouts, tight grids, mono details that speak to a technical buyer.

Voice

A senior engineer who explains clearly. Confident, plain, specific — never a sales deck. Sentence case everywhere. Spanish uses *tú*: warm, direct, professional. Colombian Spanish, never a calque of the English.

The five principles

- **The logo is the law.** Every color derives from the mark's teal → plum → gold. Ornament is rationed to two motifs.
- **Depth from borders, not shadows.** 1px hairlines and background steps. No drop shadows, no glow, no blur.
- **One accent, deliberate doses.** Plum carries interaction. Gold appears only where the eye should land.
- **Typography does the selling.** If a section feels flat, fix it with type and spacing — never with more color.
- **Every claim is specific.** Real timezone math, real certifications, real package names. No vague promises.

Who it is for

•• 01 english

US decision-makers

Founders, ops leads and CTOs at companies with no internal IT department, comparing nearshore providers from a browser tab. They are weighing us against US agencies and offshore body shops. What they need: a firm they can trust with infrastructure, security and an AI roadmap, without US agency pricing.

•• 02 español

Barranquilla and Colombian SMBs

Owners and managers who need enterprise-grade technology — security, monitoring, automation, real process — without building a department for it. They buy trust in the founders, not a brand wall.

Equal priority. The locale is the audience split; there is no flagship market. Neither language is a translation of the other, and neither is allowed to be thinner.

A faceted bloom with a star at its center.

clear space = 45% of the mark's width, on all four sides

Construction

The gradient runs teal → plum → gold along the diagonal, matching the light source implied by the facets. It is the one place a gradient may appear as a fill. Never recolor the mark, never flatten it to a single tone, and never redraw the facets.

Minimum size

24px on screen, **10mm** in print. Below that the facets close up and the star at the center stops reading.

Lock-up

Mark and wordmark sit on a shared baseline with a gap of 10px at a 48px mark. The wordmark is Clash Display 600, lowercase, letter-spacing -0.02em, in --ink. It is never set in another face.

novieri

do

Place the mark on white, on the black stage, or on plum-wash. Keep the full gradient. Scale proportionally.

don't

Add a shadow or glow. Rotate it. Place it on a busy photograph. Recolor it to one flat tone. Stretch it.

At size

96px

48px • header

24px • minimum

Below 24px the facets close and the star fills in. Use the wordmark alone rather than a mark nobody can read.

White and black carry the page. Jewels do the work on top.

Every ratio below is measured, not estimated. WCAG AA needs 4.5:1 for body text and 3:1 for large text; AAA needs 7:1.

ink — text on white

ink

#16121D

Body text on white.

18.45:1 on white · AAA

ink-muted

#554D60

Secondary text, long-form prose.

8.03:1 on white · AAA

ink-faint

#6F6880

Labels, meta, fine print. Large or bold only.

5.29:1 on white · AA

accents on white

plum

#4F3461

The interaction colour. Buttons, links, focus.

10.52:1 on white · AAA

plum-deep

#3B2549

Hover state for plum.

13.58:1 on white · AAA

gold-deep

#77613C

Gold where small text needs to pass AA.

5.90:1 on white · AA

teal

#264E59

The third voice. Managed IT accent.

9.07:1 on white · AAA

gold

#A8875C

The .. motif and ornament on white.

3.34:1 on white · AA large only

Proportion

white and ink ~86% · plum-wash ~8% · plum ~4% · gold ~2%

Gold is the rarest thing on the page and should stay that way — it marks where the eye is meant to land, and a page with gold in four places has told the reader nothing. Plum is reserved for interaction; if something is plum, it should be clickable.

The dark stage.

Black sections are moments, not the default: the hero, the assistant panel, the call-to-action band, the footer. Each accent swaps to its bright twin so it does not sink into the ground.

**on-dark**

#F4F2F7

Body text on the black stage.

17.71:1 on black · AAA

**plum-bright**

#8D63AD

Plum, on a dark surface.

4.24:1 on black · AA large only

**teal-bright**

#4F93A6

Teal, on a dark surface.

5.68:1 on black · AA

**on-dark-muted**

#A49CB2

Secondary text on black.

7.48:1 on black · AAA

**gold-bright**

#C9A878

Gold, on a dark surface.

8.77:1 on black · AAA

The gradient rule

A gradient is permitted in exactly three places: the logo artwork, the gem's core and facets, and the 2px seam that joins a dark section to a light one. Never on text. Never as a background fill. Never on a button.

the seam — 2px, teal → plum → gold

Where the stage appears

- The home hero, and nowhere else above the fold.
- The assistant panel — the product showing itself.
- The call-to-action band before the footer.
- The footer.

What the seam is

A structural joint, not decoration. It marks the boundary where the page changes state from light to dark, and it earns its gradient by being 2px tall. A seam between two sections of the same color is residue — remove it.

Three families, ten steps, no exceptions.

Your outsourced technology team

clash display 600 — display and headings

Support that answers, computers kept current, and a network built to keep interruptions down.

satoshi 400 / 500 / 700 — body and interface

01 barranquilla, colombia · eastern time coverage

jetbrains mono 400 — labels, indices, numbers

The scale had seventeen sizes once, six of them within 5px of each other. It has ten, and every size on the site is one of them. Nothing is set in a size that is not in this table.

token	role	size	face
--text-h1	Hero headline	clamp — 40 to 72px	Clash Display 600
--text-h2	Section headline	clamp — 32 to 52px	Clash Display 600
--text-display-sm	Card and panel heading	26px	Clash Display 600
--text-h3	Sub-heading	22px	Clash Display 600

--text-small	Lists, cards, UI	15px	Satoshi 400
--text-caption	Labels, fine print	13px	Satoshi 400
--text-micro	Mono tags and indices	11.5px	JetBrains Mono 400

Two marks, rationed.

The two dots

Opens every eyebrow, marks every list item, numbers every index as ··01. Gold on white, gold-bright on black. It is the single most recognizable thing the brand owns after the mark itself.

The four-point star

The gem's core. Used as a separator in marquees and as ornament on dark bands. Never as a bullet — that is the dots' job — and never more than once in a viewport.

The per-pillar accent

Each service pillar owns a color, carried by the ·· marks on that pillar's pages and nothing else. Interaction stays plum everywhere, on every pillar — a second interaction color would compete with the first.

pillar	the mark	token	hex	buttons
AI & automation	··	plum	#4F3461	plum
Managed IT	··	teal	#264E59	plum
Cybersecurity & compliance	··	gold	#A8875C	plum
Custom software	··	ink	#554D60	plum

Anatomy of an eyebrow

·· how we work

- Gold dots, 700 weight, tracking 0.12em, sitting on the baseline.
- Label in JetBrains Mono, 13px, tracking 0.1em, lowercase.
- Color --ink-muted on white, --on-dark-muted on black.

the accent may

Color the ·· marks on a pillar's own pages. Nothing else changes between pillars.

the accent may not

Color a button, a link, a focus ring, or body text. Those are plum and ink on every pillar, in both languages.

Depth from borders.

Structure

- Max width **1240px**, centered.
- Section padding **clamp(3.5rem, 9vh, 6rem)**.
- Reading measure **640px** for long-form, at 19px.
- Cards: 1px hairline, 16px radius, no shadow.
- Touch targets never below **44px**.

Motion

- Reveal on scroll: 16px rise, 600ms, 60—90ms stagger.
- Hover: cards lift 4—6px, buttons 2px, arrows slide.
- The gem breathes continuously; nothing else loops.
- All animation is gated behind `html.js` — content is visible without JavaScript.
- **prefers-reduced-motion collapses every animation to zero** and sets revealed content to full opacity. Never strand content at opacity 0.

Anti-references — what this brand is not

visual

Gradient text. Glassmorphism. Glow. Drop-shadow cards. Hero-metric templates. Carousels. Video heroes.

imagery

Stock photos of handshakes, headsets, or people pointing at screens. Logo-soup trust bars.

copy

Buzzwords — synergy, empower, revolutionary. Exclamation marks. Title Case headlines. Vague promises.

Controls

Book a call

Secondary

tag

Text link →

Radius 10px on buttons, 16px on cards, 6px on tags. Primary is plum with white text at 10.52:1. Secondary is a hairline, never a second fill color.

Say the specific thing.

The test for any sentence: could a competitor publish it unchanged? If yes, it is not finished.

do — from the live site

“Most firms make you sit through a sales call before you hear a price. Here is ours up front.”

“Two things happen before you answer, and we would rather write them down than let you discover them.”

“AI answers can be wrong. Don’t share passwords or payment details here.”

don’t

“We leverage cutting-edge AI to empower your digital transformation journey!”

“Industry-leading solutions tailored to your unique needs.”

“Contact us today to learn more!”

English

- US spelling and conventions. 1,000+, not 1000+.
- Sentence case in headlines, navigation and buttons.
- Em dashes for asides, not semicolons.

Español

- Colombian Spanish, *tú*, never *usted* and never a calque.
- Sentence case, and accents always: **Consultoría**, never *Consultoría*.
- Numbers in local format: +1.000, \$95.000.

One verb per destination

Every control that promises a meeting says **Book a call / Agendar llamada** and goes to the calendar. Nothing else uses a booking verb. A label that promises a booking and lands somewhere else is a bug, and the build fails on it.

Naming a page, a product, a menu item

Navigation is where these conventions slip first, because menu items are typed by hand in a CMS rather than written in a file with the rest of the copy.

rule	yes	no
Sentence case, always	AI & automation	AI & Automation
Initialisms keep their capitals	Managed IT • TI administrada	Managed it • Ti administrada
The label is the page’s name	Desarrollo de software	Desarrollo a medida
Same order in both languages	Productos matches Products	a different sequence per locale
Plain words over category jargon	Resources • Recursos	Insights

•• 08 — in one line

If a section feels flat, fix it with type and spacing.

Never with more color. The palette is small on purpose, the ornament is rationed on purpose, and the restraint is the premium signal — not the decoration.
